

## PAPER PREVIEWER FROM PRELOADED INFORMATION

## ABSTRACT

A method of configuring paper stock in a printing device. The method includes loading paper into a tray of the printing device and then providing information about the paper and the tray to the printing device. Once the information is provided to the printing device, a user interface is updated to include that information. Also included is a method presenting a user interface that includes establishing a window on a display device viewable by a user and providing the user with a view of paper in at least one paper tray of the printing device. The method also includes the step of allowing the user to select the at least one paper tray to complete a print job.
